Scrum Master (m/f/d)

Description

Ocean Insights as part of project44 combines container liner schedules and carriers' container tracking information with neutral AIS vessel tracking data, allowing our customer to plan and monitor supply chain operations on a level never experienced before.

With strong IT focus and an expert team of data analysts, we take pride in supporting our customers and showing the guiding thread in a field where data is often hardly available and even less often comparable.

Our team is constantly working on new approaches and innovative solutions to make our customer's day-to-day operations easier and give them the knowledge and tools to be a step ahead.

Responsibilities

- support colleagues in becoming a collaboratively accountable team
- support product owner in effectively managing our product and dealing with stakeholders
- support the entire organization in understanding and deeper adoption of Scrum

Qualifications

- Scrum Master certification
- min. 3 years of experience as Scrum Master (ideally in different teams and organizations)
- know, live and be able to communicate Scrum values
- familiar with team development
- experience in coaching Product owner

Job Benefits

We offer everything to enable a balance between work and life. For us, a flexible work model is as much a part of our daily lives as home office or eight hours of free education time per month.

Coffee, tea, water and fruits are available in our offices, and we also offer regular activities (e.g. archery, self-defense, bouldering) for all employees.

Our everyday working life is flanked by the warm, open and at the same time performance-driven company culture.

All employees benefit from a variety of options. A subsidized company pension scheme, working from offices around the world for some time or stock options – Your choice!

We are scattered all over the world, so there is always a breeze of the big wide world blowing through our office.

Become a part of our open and ambitious team!
